

WEB3 MINING GAME / REAL METAL TAILINGS

Ore.

A GoMining-style mining game where each in-game miner is backed by a share in physical, licensed mineral tailings — not synthetic scarcity.

YEVGEN YANOVSKYY / VICTOR VYSHNEVETSKYY / COAL ENERGY S.A. (WSE: CLE PW)

SEED ROUND 2026

GoMining works. But its scarcity is fake.

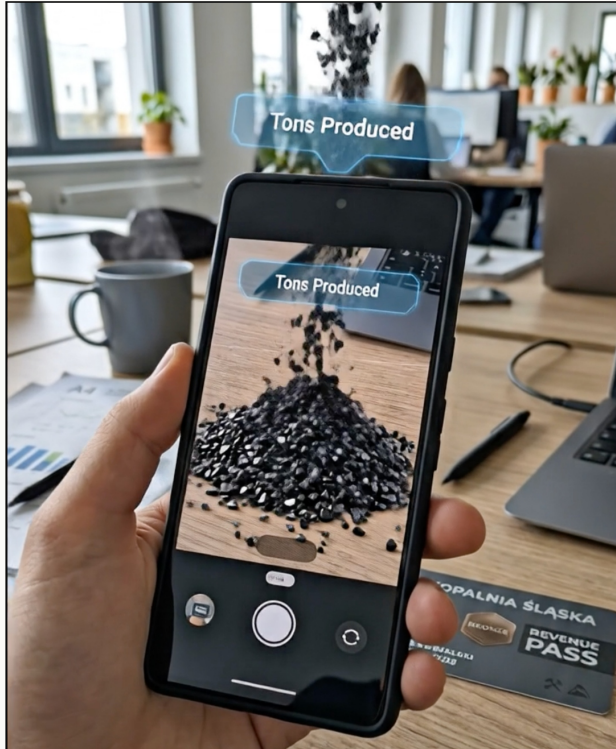

TODAY – GOMINING

NFT miners with arbitrary rarity. Yield is deterministic: network difficulty × BTC price. No surprise, no game. Rarity exists as a label but does not produce premium ROI — players optimize hashrate only.

ORE

Each in-game miner is collateralized by a share in real, licensed metal tailings. Total yield is geologically stochastic with known bounds. Variance is the gameplay — floor protected by licensed inventory, ceiling driven by full recoverable basket.

Mining was always a game in real life. Ore restores that.

AR PREVIEW / NFC-BOUND REVENUE PASS / TONS PRODUCED OVERLAY

Back to real.

Each NFT is bound to a physical NFC card — a Revenue Pass. Phone taps the card; AR layer projects the deposit's physical output — tons produced from your share — onto whatever surface is in front of you.

Coal grains pouring onto your desk. Gold accumulating in your kitchen. The asset has a location in the world, not just in a wallet.

FULL DEMO → ore-team.com

Three deposits.

Licensed inventory sourced and extracted by Coal Energy S.A. — Ore's mining partner.

LOCATION	DEPOSIT	RECOVERABLE BASKET	TOTAL YIELD BAND
CALIFORNIA, USA	Polymetallic gold tailings	Au, Ag, Cu, Zn, Pb	25–60% / yr
ROMANIA	Gold-anchored tailings, ~30 Mt	Au, Ag, Cu, Zn, Pb, Cd	35–75% / yr
TSAIDAM NUUR, MONGOLIA	Brown coal, ~800 Mt	Brown coal, calorific	25–45% / yr

Yield bands are field estimates of total deposit yield and reflect geological extraction variance — known distribution, unknown draw. Bands are gameplay, not hidden risk.

Two operators.

Complementary, non-overlapping moats.

YEVGEN YANOVSKYY / CEO

20-year bootstrapped operator. UVO Group EdTech — \$60M+ cumulative profit, 350 staff, 1,000–3,500 contractors. Co-founder PlagiarismCheck.org / Integrito — ~\$1M ARR, 36% YoY, 342 institutions, raising \$2.3M SAFE at \$20.5M pre. Active GoMining player: 67,000 TH/s controlled, farm #15 globally; holder of the platform's #1 individual NFT miner by TH (6,000+) and by rarity — both on-chain verifiable. Currently studying Quant Academy SpreadFighter.

VICTOR VYSHNEVETSKYY / CO-FOUNDER, CHAIRMAN

Mining engineer (Donetsk Polytechnic, 1990), PhD Engineering Sciences (1999) — mineral-deposit development technology. Chairman and majority shareholder, Coal Energy S.A. (Warsaw Stock Exchange, ticker CLE PW since August 2011; peak market cap \$320M). 2002–2014: restored 10 Donbass coal mines, processed 10 Mt anthracite-bearing waste rock. Pre-war workforce ~5,000; ~200-person core team post-reconstitution. Commits 80% of that team — geologists, surveyors, mining technologists, economists — to Ore with personal daily oversight.

ADVISORS

Dmytro Pavlov — mathematician, Google-awarded online-advertising specialist, founder of multiple ventures. Top-5 EU-licensed iGaming CEO — identity under NDA. EU legal counsel retained.

We are GoMining's top user.

Then we found what GoMining left on the table.

CLAN RANKING

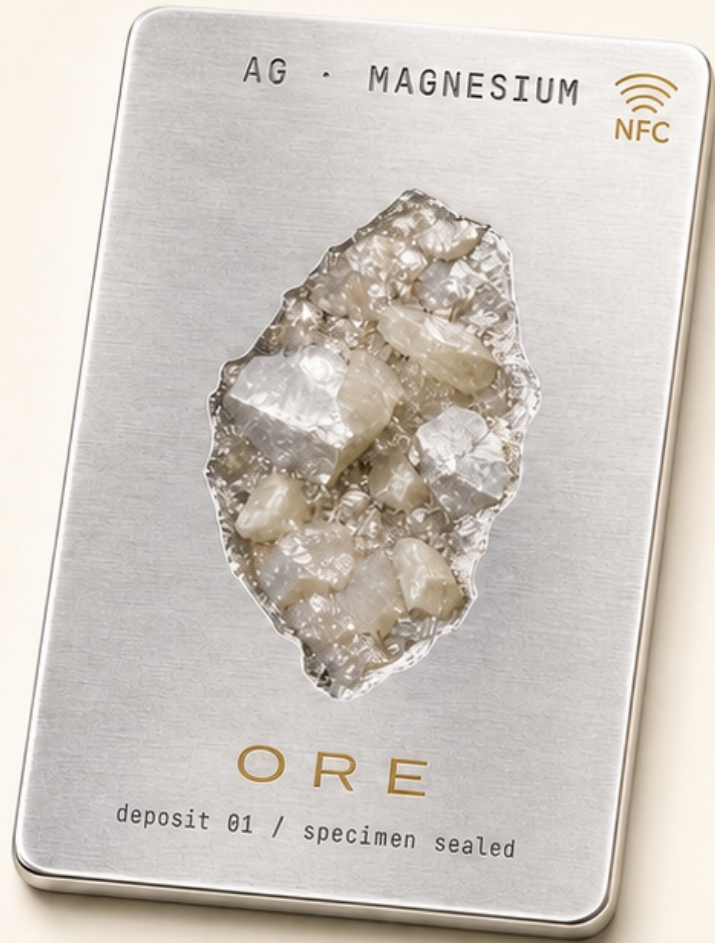

co-architect of league progression

GoMining rarity is a label, not a revenue lever. Players optimize hashrate; rarity does not produce premium ROI. Ore fixes that: rarity = real geological scarcity, priced in by extraction yield. The platform's #1 user is building its successor.

We're applying to SR007.

Speedrun gives us 12 weeks to validate one product against three demand sources in parallel — to see which gives traction and to collect raw reply data for positioning.

- WK 1-4 Smart contract + game loop + first deposit linked on-chain
- WK 5-8 Closed beta against three parallel segments — HNW personal network, GoMining players, Web3-native (targeted influencers)
- WK 9-12 Compare segment traction + reply data. Public beta on the winning channel. Second deposit underwritten.
